TEST REPORT FOR VELUX AMERICA LLC

Report No.: N2827.01-550-44

Date: 03/16/22

REPORT ISSUED TO

VELUX America LLC

1418 Evans Pond Road

P.O. Box 5001

Greenwood, South Carolina 29648-5001

SECTION 1

SCOPE

Architectural Testing, Inc. (an Intertek company) dba Intertek Building & Construction (B&C) was contracted by VELUX America LLC, 1418 Evans Pond Road, P.O. Box 5001, Greenwood, South Carolina 29648-5001 to evaluate the OSHA fall protection testing to the most recent referenced documents. A total of 20 separate design styles of skylights were evaluated on wood curb decks only as noted below, for a total of 40 tests. This testing is intended to cover both curb-mount (wood) and deck-mount domed skylight products. Reference Intertek Report M7571.01-550-44R1 and Test Plan IP01-073021 for consideration of determining deck-mount equivalency per the WDMA Hallmark Certification Program.

Results obtained are tested values and were secured by using the designated test method(s). Testing was conducted at the VELUX America LLC facility in Greenwood SC. This report does not constitute certification of this product nor an opinion or endorsement by this laboratory.

Occupational Safety and Health Administration (OSHA)/U.S. Department of Labor Regulations Standard 29 CFR §1910.29 – Fall protection systems and falling object protection-criteria and practices. Section 1910.29(e)(1) requires a cover to be capable of supporting, without failure, at least twice the maximum intended load that may be imposed on the cover at any one time.

California Code of Regulations, Title 8, Section 3212 §(b), which states, "covers shall be capable of safely supporting the greater of 400 lbs or twice the weight of the employees, equipment and materials that may be imposed on any one square foot area of the cover at any time."

For INTERTEK B&C:

Note: As provided per VELUX America LLC Testing Plan

SECTION 3

TEST REGULATION(S)

The specimens were evaluated in accordance with the following:

1. Occupational Safety and Health Administration/U.S. Department of Labor Regulations (Standards – 29CFR) – 1910.29
2. California Code of Regulations, Title 8, Section 3212

TEST REPORT FOR VELUX AMERICA LLC

Report No.: N2827.01-550-44

Date: 03/16/22

SECTION 4

MATERIAL SOURCE/INSTALLATION

All test specimens were provided by the client. Representative samples of the test specimen(s) were identified and marked at the VELUX America LLC facility where the testing was witnessed. Samples were marked by the Intertek representative, packaged for shipment by VELUX America LLC, and were shipped to the Intertek Lithia Springs GA location where they will be retained by Intertek B&C for a minimum of four years from the test completion date.

Each test specimen was installed onto framework consisting of Southern Yellow Pine 2x8s creating the curb and frame, and 4x4 legs to support the frame. 6x6 test frames had 4 legs; 5x8 and 4x8 frames had 6 legs: one each corner and midspan of long span. Installation of the tested product was performed by VELUX America LLC personnel. The specimen was installed per VELUX America LLC product installation manual into a wood buck.

LOCATION	ANCHOR DESCRIPTION	ANCHOR SPACING
Aluminum frame to wood curb	Screw fastened through predrilled holes in the extruded aluminum frame	Predrilled holes in the aluminum frame were located nominally 8" from each corner and nominally 12" on center from corner holes along length of span; Nominal 6'x6' sizes had 6 anchors points per side; Nominal 4'x8' sizes had 5 anchor points per short span and 8 anchor points per long span; Nominal 4'x8' sizes had 4 anchor points per short span and 8 anchor points per long span. Screws used to fasten were #8x1-3/4" FH.

SECTION 5

EQUIPMENT

Calibration Certificates were provided for the following:

- Scale (Ohaus) Certificate # 3381-013120-01 dated 8/11/2021, Serial #B950772644, Next Service Date 02/11/2022, capacity 5000 lbs.
 - Impact Bag 1: 102 lbs.
 - Impact Bag 2: 202 lbs.
 - Impact Bag 3: 404 lbs.
- Load Cell (Loadstar) Certificate Calibration Date 8/12/2021, Recalibration Due Date 08/12/2022, Serial # F213131779
- Calibrated Tape Measure (mm), ID #A11E2545, Calibration Date May 2021, Recalibration Date May 2022

Other

- 50 lb. sandbags
- iPhone used to monitor time of test

Greg Collins	VELUX America LLC
Daniel J. Wise	Intertek B&C
Brock Viness	Intertek B&C

SECTION 7

TEST PROCEDURE(S)

Static Load Testing: A specified weight (load) was applied using nominal 50 lb. sandbags arranged uniformly on a wood skid with a calibrated load cell attached from the skid to the load foot using a steel rod. Total weight of sand on the skid was approximately 1400 lbs. The loading was applied to the test specimen using a forklift to incrementally lower the weighted skid and measuring the weight of load using a calibrated load cell. The load was placed at the center of the glazing for a minimum of 60 seconds. The foot used to apply the load to the surface of the glazing was fabricated from nominal ½" plywood and measured nominally 13-1/4" wide by 30" long (2.8 ft²).

Dynamic Load Testing: A weighted bag was dropped from a designated height. After impact the bag was removed, and the test unit was inspected for any signs of damage. Per client request, weighted bags of either 102 lbs, 202 lbs or 404 lbs were dropped from varying heights above the skylight at the specified heights and bag weight. The highest load resulting in passing was recorded. In some cases, testing was stopped prior to product failure.

SECTION 8

TEST SPECIMEN DESCRIPTION

Product Type: Fixed Domed Skylight with One-Piece Extruded Aluminum Frame

Series/Model Specimen 1: IMA Dynamic DMD2/CMD2 6096 S1N2 (2 Glazing Layers)*

Series/Model Specimen 2: IMA Traditional DMT2/CMT2 6096 S1N2 (2 Glazing Layers)*

Series/Model Specimen 3: Polycarbonate Dynamic DMD2/CMD2 6096 P1C2 (2 Glazing Layers)*

Series/Model Specimen 4: Polycarbonate Dynamic DMD2/CMD2 6096 P1P2 (2 Glazing Layers)*

Series/Model Specimen 5: Polycarbonate Dynamic DMD2/CMD2 7272 P1P2 (2 Glazing Layers)*

Series/Model Specimen 6: Polycarbonate Dynamic DMD2/CMD2 6096 P1H1 (2 Glazing Layers)*

Series/Model Specimen 7: Polycarbonate Traditional DMT2/CMT2 4896 P1C2 (2 Glazing Layers)*

Series/Model Specimen 8: Polycarbonate Traditional DMT2/CMT2 6096 P1P2 (2 Glazing Layers)*

Reinforcement: No reinforcement was utilized.

TEST REPORT FOR VELUX AMERICA LLC

Report No.: N2827.01-550-44

Date: 03/16/22

Weatherstripping:

DESCRIPTION	QUANTITY	LOCATION
Low- or High-Profile PVC Extruded Custom-shaped Lineal with 4 Rows of Dual-durometer Fin (note two different but similar profiles were used and was dependent upon glazing layers)	1 Row	Located around the interior perimeter of the aluminum frame

Glazing: *No conclusions of any kind regarding the adequacy or inadequacy of the glazing in any glazed test specimen(s) can be made.*

Glazing method: The glazing was set from the exterior onto one of the following: 1) a rigid PVC low-profile lineal (double glazing) or 2) a rigid PVC high-profile lineal (triple glazing) against the 2x4 wood curve. The glazing was secured from the exterior using the extruded aluminum frame that is attached to the PVC lineal with co-extruded fins (part # 320293) using a specified number of six lobe truss head SST #10-16X5/8" AB tapping screws (part # 320291) every 12" from corner screws set at 8" from corner. Glazing layers were separated by a double-sided foam tape (part #320296). A single silicone bead is applied around the entire perimeter of the dome sealing the aluminum frame to the outer dome and another on the interior sealing the innermost dome to the PVC inner PVC frame lineal.

TEST REPORT FOR VELUX AMERICA LLC

Report No.: N2827.01-550-44

Date: 03/16/22

SPECIMEN 10: Polycarbonate Dynamic DMD3/CMD3 6096 P1C2 (3 Glazing Layers); Dome 1: 0.118 clear smooth Luxguard PC, Dome 2: 0.118 clear smooth PC, Dome 3; 0.118 white prismatic PC

TEST	TEST METHOD	BAG (LB)	LOAD	LOAD LOCATION	RESULTS
1	Dynamic	400	800 lbf-ft (2' drop height)	Center of dome	Pass
2	Dynamic	400	1200 lbf-ft (3' drop height)	Center of dome	Pass
3	Dynamic	400	1600 lbf-ft (4' drop height)	Center of dome	Pass
4	Dynamic	400	2000 lbf-ft (5' drop height)	Center of dome	Pass
1	Static	N/A	400 lbf	Center of dome	Pass
2	Static	N/A	600 lbf	Center of dome	Pass
3	Static	N/A	800 lbf	Center of dome	Pass
4	Static	N/A	1000 lbf	Center of dome	Pass

SPECIMEN 11: Polycarbonate Dynamic DMD4/CMD4 6096 P1L2 (2 Glazing Layers); Dome 1: 0.118 clear smooth Luxguard PC, Dome 2: 10 mm Lumira flat panel

TEST	TEST METHOD	BAG (LB)	LOAD	LOAD LOCATION	RESULTS
1	Dynamic	400	800 lbf-ft (2' drop height)	Center of dome	Pass
2	Dynamic	400	1200 lbf-ft (3' drop height)	Center of dome	Pass
1	Static	N/A	400 lbf	Center of dome	Pass
2	Static	N/A	600 lbf	Center of dome	Pass
3	Static	N/A	800 lbf	Center of dome	Pass
4	Static	N/A	1000 lbf	Center of dome	Pass

TEST REPORT FOR VELUX AMERICA LLC

TEST REPORT FOR VELUX AMERICA LLC

Report No.: N2827.01-550-44

Date: 03/16/22

SECTION 10

CONCLUSION

Each unit of the products that are identified in this report were evaluated in accordance with Occupational Safety and Health Administration (OSHA)/ U.S. Department of Labor Regulations Standard 29 CFR §1910.29(e)(1) and California Code of Regulations, Title 8, Section 3212 §(b) to determine compliance with these regulations. Results for each product type are noted in this report and identifies their level of compliance.

SECTION 11

DRAWINGS

The test specimen drawings have been reviewed by Intertek B&C and are representative of the test specimen(s) reported herein. Test specimen construction was verified by Intertek B&C per the drawings included in this report. Any deviations are documented herein or on the drawings.
